DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stihler et al. (US 5474538) in view of Truhan (US 3551641).

Stihler discloses the claimed invention including *inter alia* a body generally centered on an axis and having an outer surface formed with a radially outwardly open helical groove of a cross-sectional shape, generally corresponding to a cross-sectional shape of the tubing, whereby the tubing can be fitted to the groove in heat-exchange contact with the body, wherein the groove is of part-circular section, means for mounting the body to an IV rack with the axis generally horizontal, and means for heating or cooling the body. Stihler does not explicitly disclose the outer surface being tapered axially such that substantially all of the groove can be seen from a point axially offset from the body.

Truhan discloses an intravenous liquid-warming device for thermally conditioning stored blood, the components thereof, etc., prior to transfusion into a subject comprising a preformed, disposable, plastic multi-turn coil superimposed over and in contact with the outer surface of a frustoconical base complementary in size and shape to the coil.

It would have been obvious to one of ordinary skill in the art at the time the invention was made, in view of Truhan, to modify the device of Stihler to have a base

Art Unit: 3742

having a frustoconical shape in order to provide for a longer fluid path thereby enabling the device to provide for more consistent heating of the fluid.

Allowable Subject Matter

Claims 5-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: Though it is recognized that providing insulative covers to heating devices is well known in the art, the prior art does not show such a cover in combination with the other limitations of the independent claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thor S. Campbell whose telephone number is 703-306-9042. The examiner can normally be reached on Tue-Fri 5:30AM-4:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robin Evans can be reached on 703-305-5766. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 3742

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
